

ACETYLENE

Acetylene's safety and labor efficiency make it the industry standard
For numerous applications, including chemical synthesis, mold Release and oxy fuel cutting and welding. Working with acetylene Provides many user benefits, including low oxygen-volume ratio, the highest flame temperature of any fuel gas and its general flexibility and ease of use

Micro Bulk Pack

Westerns Micro Bulk Pack offers the benefits of bulk acetylene in an easy-to-use pre-packaged system. Pallet-ready Micro Bulk Packs are a convenient and cost-effective source of acetylene for cutting, welding, heat treating, mold release and other applications.

- **Increased Capacity**

Each pack contains approximately 4500 cf of acetylene and can deliver up to 300cf of acetylene on a continuous basis, providing increased capacity for applications that have historically required use of other fuel gases

- **Reduced Labor**

Each pack can be moved by forklift or lifting eye. Customers no longer have to "roll" cylinders to their applications. By using Micro Bulk Packs, customers have reduced labor and handling of cylinders by up to 80 percent

- **Ease of Transport**

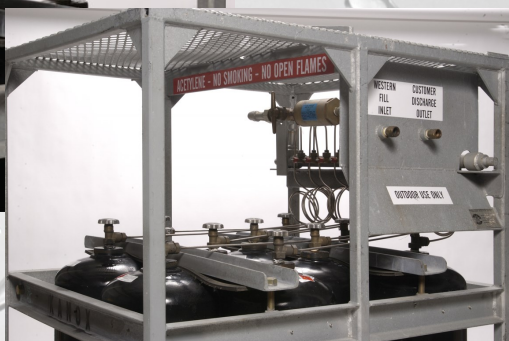

Each pack can be transported on a standard cylinder trailer, thereby reducing distribution expenses.

- **Ease of Use**

Because the cylinders are in a manifold, users only have one "make and break" connection.

- **Safety**

Micro Bulk Pack cylinders are fully approved by the US DOT and meet all safety regulations of the CGA
